

# A good story worth retelling

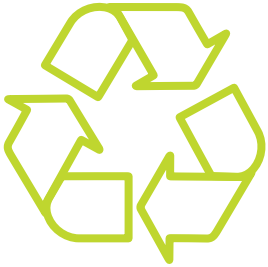

During 2019, **Fracht ARG** organized a maritime shipment which brought 15,000 tons of sand for fracking in "Big bags"(Poly Sandbags) from USA to our country for the Oil & Gas industry. Once the sand reached its destination, the oil wheels, the same were discarded as trash, thus causing waste pollution and contamination of the environment.

**Fracking Design** is a familiar endeavor in the textile industry carried out by three sisters with 10-year-experience in the field.

This enterprise consists in entering the sustainable fashion market. They have focused on the innovative process of recycling the "Big Bag" waste since 2018. They have selected an industrial recycling treatment combining the bags with cattle hides which transforms the waste into a super resistant raw material.

**Fracht ARG**, purchase **Fracking Design** products to show our commitment and contribution to achieve a sustainable environment.
